Dear Hiring Manager,

I'm writing to express my interest in a product or analytics role on your team. I'm a Product Manager who works close to the data: I turn behavioural and funnel signals into shipped product improvements, and I own the measurement layer end to end—instrumenting the events, sizing the impact of a fix, and partnering with engineering and design to lift conversion and retention.

In my current role as Associate Product Manager at Collegedunia, I analyse GA4 event data across CRM and LMS modules to map user journeys, isolate funnel drop-offs, and quantify the conversion impact of each fix before it reaches the roadmap. I define and track KPIs across engagement, conversion, and retention, and build single-source-of-truth dashboards in Power BI, GA4, and Google Sheets that let stakeholders act in seconds. When a hypothesis needs proving, I write the SQL and run the cohort and retention analysis myself.

I also like to build. I designed and shipped two in-house messaging products, Textify and WhatsAppify, that consolidated customer communication onto a single platform and removed our reliance on third-party vendors. By defining clear success metrics and owning the rollout, the products reached 10,000+ customers per campaign, cut manual send time by roughly 70%, reduced vendor costs by around 40%, and scaled support to 500+ conversations a day. Earlier roles at Atisunya, Labmentix, and Siemens sharpened the same instinct—turning messy data into decisions, authoring PRDs, and automating the reporting that teams depend on.

What draws me to your team is the chance to work on high-consideration funnels where a single number can reshape the customer journey. I'd welcome the opportunity to bring that mix of product sense and hands-on analytics to your product, and I'd be glad to walk through my work in more detail.

Thank you for your time and consideration.

Warm regards,

Sanskar Maurya
